- Smaller widths are available through slitting.
- All the sizes above are available on a 48 hr lead time.
- Other sizes are available on request, subject to a minimum order quantity, on a 2 week lead time.

Corus Accredited Distributor

When specifying Colorcoat® pre-finished steel products for the building envelope it is also important to consider the specification of material for other elements of the building. Flashings, soffits, louvres, fascias, canopies, and corner details should have the same integrity as the pre-finished steel building envelope and the Colorcoat® product from which they are fabricated.

Capital Coated Steel, Corus Colorsteels and Euroclad have been evaluated and approved as Corus Accredited Distributors of Colorcoat® products. The storage, handling, processing and range of Colorcoat® pre-finished steel products have been assessed and found to meet the highest standard of quality and service.

Corus Accredited Distributors supply Colorcoat® products, in all popular colours and bespoke quantities, to the quality expected by Corus and our customers.

The importance of EN 10143:2006

The European Standard EN 10143:2006 specifies the thickness tolerances for hot dipped metal coated low carbon steel, which is the substrate used for all pre-finished steel products. Please note that the tolerances vary for different steel grades and for different nominal width material. In addition tighter tolerances are available, these will depend on supplier capability and are subject to price extra.

A 1250 mm wide coil of material, 0.7 mm nominal gauge and 220 minimum yield strength, has a normal tolerance of ± 0.06 mm and must therefore measure between 0.64 mm and 0.76 mm. This is the thickness of the hot dipped steel including the metallic coating but excluding the paint coatings. All Colorcoat® pre-finished steel products supplied through a Corus Accredited Distributor are manufactured to nominal ordered gauge and subject to the requirements of EN10143:2006.
